Description: Two critical areas our students need to develop are their ability to solve multi-step math word problems and their ability to reason about mathematics. This workshop will present several strategies, easily replicated by a classroom instructor. Participants will engage in several activities that will move their students towards improved problem solving and reasoning. *See these activities today – do them tomorrow with your students!*

Objectives:

- Develop an awareness about practices that build academic rigor and engage students
- Improve students' understanding of problem solving and math reasoning

For additional information contact Peggy Neal
at pneal@crec.org.

*Please bring ear buds and a laptop or other
device for note-taking and access to on-
line resources.*
